

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

## NOTES FROM PACIFIC COAST OBSERVATORIES.

---

The change in the heading of this department of the *Publications* has been under consideration for some time. The substitution of the broader title "Notes from Pacific Coast Observatories" for the "Notices from the Lick Observatory" does not mean that there has been the least change in the intimate and cordial relations that have existed between the Lick Observatory and the Astronomical Society of the Pacific from the time of the Society's inception. It is rather a recognition of the steadily increasing importance of the Pacific Coast as an astronomical center, of which the recent founding of the great Solar Observatory of the Carnegie Institution at Mt. Wilson is substantial evidence; and it is in harmony with the policy of the Directors to make the Society what its name—the Astronomical Society of the Pacific—indicates, representative of the astronomical interests of the entire Pacific Coast.

Notes relating to the observatories west of the Rocky Mountains or to the work of astronomers in this section of the country will be printed in this department. These notes will be signed, and the author will in every case be responsible for the statements made. Notes relating to astronomical work elsewhere, items of interest taken from other periodicals, reviews of astronomical publications, etc., will be printed under the heading "General Notes." These notes may or may not be signed, the Editors accepting full responsibility for those unsigned. Longer articles will, as heretofore, precede these departments.

The co-operation of all members of the Society—and especially of those connected with observatories on the Pacific Coast—in sustaining and increasing the value and interest of the *Publications* is cordially invited.

THE COMMITTEE ON PUBLICATION.
